Special Issue "Nonlocal Frontiers of the Universe"

Special Issue Editor :

Dr. Igor Bulyzhenkov

Moscow Institute of Physics and Technology and
Lebedev Physics Institute RAS, Russia

Submission Deadline:

30 December 2021

The purpose of this Special Issue is to collect theoretical approaches and proof-of-concept experiments to shed light on the large-scale organization of inertial and electrical energies and consistently comment on the distantly and timelessly correlated quasars, the coordinated motion of galaxies, and the centuries-old stability of the Solar system. This brainstorming collection is also intended for inexplicable experimental problems in the near-Earth space and the Noosphere, including non-local phenomena of living systems, distant bio-cell communications, mind–matter interactions, alternative biomedical practices, and advanced neuro-technologies.
